Varianticonal endoplasmic reticulum ATPase - pig

NyAlternate names: CDG48 homolog; TER ATPase; valosin-containing protein

NyContains: ATPase (EC 3.6.1.)

C;Species: Sus scrofa domestica (domestic pig)

C;Species: Sus farcofa domestica (domestic pig)

C;Accession: A26360; A01627

R;Koller, K.J; Browmstein, M.J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vibranciption: catalyzes the reduction of many oxide compounds
A;Description: catalyzes the reduction of many oxide compounds
A;Note: cofactor molybdenum; is synthesized inducibly in the presence of dimethyl sulfox
B;Superfamally: trimethylamine-Noxide reductase
C;Keywords: molybdenum; monomer; oxidoreductase; periplasmic space
F;1-42/Domain: signal sequence #status predicted <SIG>
F;3-822/Product: methionine-S-oxide reductase #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

T proble- in novel dynamin-like high molecular weight GTPase lacking a

T proline-rich carboxyl-terminal domain in mammalian cells.",

J. Biol. Chem. 273:1044-1051(198).

-I- FUNCTION: Functions in mitochondrial and peroxisomal division

probably by regulating membrane fission. Enzyme hydrolyzing GTP

that oligomerizes to form ring-like structures and is able to

remodel membranes. May also play a role on organelles of the

secretory pathway (By similarity).

-I- CATALYIT: Homotetramer; N-terminal part binds to the C-terminal

part of another DNM1. Can self-assemble in multimeric ring-like

structures. Interacts with GSK3B and TTC11 (By similarity).

-I- SUBUNIT: Homotetramer; N-terminal part binds to the C-terminal

part of another DNM1. Can self-assemble in multimeric ring-like

structures. Interacts with GSK3B and TTC11 (By similarity).

-I- SUBCELLUIAR LOCATION: Cytoplasmic, mainly cytosolic. Also

membrane-associated. Localizes to mitochondria at spots of

division events. Associated with peroxisomal-membranes it is

recruited in part by PEXIIB. May also be associated with

cendoplasmic reticulum tubules and cytoplasmic vesicles and found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This Swiss-Prot entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TISSUE SPECIFICITY: Expressed in the cereballum and in several regions of the cereballum and in several regions of the cereballum and disnessed in the cereballum and in several the cereballar burkinje calls and in the pointile giant neurons. PTM: Phosphorylated by GSK3B (By similarity).

SIMILARITY: Belongs to the dynamin family.

SIMILARITY: Contains 1 GED domain.

CAUTION: This is a conceptual translation (isoform 1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IsoId=Q8K1M6-4; Sequence=VSP_013689, VSP_013691, VSP_013695;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GTP (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.
CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.
CATALYTIC ACTIVITY: GTP + H(2)O = GDP + phosphate.

SUBUNIT: Homocternamer; N-terminal part binds to the C-terminal part of another DNMIL.
Can self-assemble in multimeric ring-like structures. Interacts with GSX3B and TTC11.
SUBCELLUIAR LOCATION: Cytoplasmic; mainly cytosolic. Also membrane-associated. Localizes to mitochondria at spots of division events. Associated with peroxisomal-membranes it is recruited in part by PEX11B. May also be associated with endoplasmic reticulum tubules and cytoplasmic vesicles and found to be perinuclear (By similarity).
